FARM PRODUCE RECEIVED IN TRUCKS
IN THE
COLUMBUS WHOLESALE MARKET
1932

For four and one half years the receipts of fresh fruits and vegetables in the municipal Producers' Wholesale Market in Columbus, Ohio, have been recorded. The Division of Markets of the Ohio Department of Agriculture has maintained a reporting service in that market since July 2, 1928, and has compiled daily reports of arrivals and prices.

These receipts have been tabulated and analyzed each year by the Department of Rural Economics of the Ohio Agricultural Experiment Station. The arrivals in the last six months of 1928 and in the years 1929, 1930 and 1931 were recorded in Bulletins No. 16, 25, 40 and 45 of this series. The supply of these bulletins has been exhausted and they are no longer available for distribution. The receipts during 1932 are set forth herein.

In 1932 a much greater volume of produce was received in trucks than in any previous year. Arrivals exceeded 32 millions of pounds, an increase of almost 23 per cent over 1931, when the previous high point had been reached.

The number of truck loads received declined slightly from 15,762 in 1931 to 15,340 in 1932, but loads were larger. The average net weight per truck rose from 1686 pounds in 1931 to 2127 pounds in 1932, an increase of 26 per cent.

The area in which these 1932 supplies originated included 10 states in addition to Ohio, the largest number yet recorded. 541 truck loads arrived from points outside Ohio, located in Florida, Georgia, Indiana, Kentucky, Michigan, New York, Pennsylvania, South Carolina, Tennessee and West Virginia. In 1929 only 19 truck loads arrived in this market from points outside Ohio, and only 4 other states were represented.

Expansion of the area furnishing supplies to Columbus in motor trucks during the last four years is reflected in a greatly increased average one-way haul per truck. In 1929 the average distance traveled was 18.9 miles, in 1930 it was 27 miles, in 1931 it was 25.9 miles, and in 1932 it was 37.6 miles. The average in 1932 was practically double that of four years earlier.

Further declines in wholesale prices in 1932 are revealed in the estimated values of the goods sold in this market. Despite an increase of 23 per cent in tonnage over 1931, the gross value declined from 747 thousands of dollars to 658 thousands, a loss of almost 12 per cent, and the smallest figure recorded in the four years for which records are available. During the years 1929 to 1932 the value of the goods sold averaged approximately \$723,000.00 annually.

A comparison of the receipts in the Columbus municipal market during the four years 1929 to 1932 inclusive is given in the following table.

Table 1. Receipts of Produce in Trucks in Columbus, 1929, 1930
1931 and 1932

	1929	1930	1931	1932
Total number of truckloads	12,069	11,320	5,762	15,340
Truckloads from other states	19	273	166	541
Truckloads from Franklin County	8,013	7,687	9,508	8,597

Total round-trip distance traveled (mi.)	456,432	612,110	817,134	1,153,670

I. Truck Receipts vs. Rail Receipts

Receipts on the Producers' Wholesale Market are recorded in original units such as bushels, bunches, dozens, crates, etc., but in this report are converted into pounds for purposes of comparison. Likewise carlot unloads have been converted into pounds in order to express all receipts in comparable terms.

Carlot unloads of fresh fruits and vegetables in Columbus in 1932 aggregated 6,784 carloads, or approximately 194,840,500 pounds. During the same period 15,340 trucks containing 32,633,944 pounds of produce were received in the Producers' Wholesale Market. Truck receipts constituted 14.3 per cent of the supplies of these commodities received in 1932, an increase from 8.4 per cent in 1929, 10.3 per cent in 1930 and 12.3 per cent in 1931. Total receipts, both by rail and by truck, aggregated more than 227 millions of pounds.

Carlot unloads of most of the leading commodities are reported annually by the United States Bureau of Agricultural Economics. Other commodities, not thus reported, are recorded in terms of carlot arrivals by the Columbus office of that bureau cooperating with the Ohio Department of Agriculture. Carlot arrivals include not only cars unloaded in Columbus but also a few cars diverted to other destinations. The exact number diverted is unknown. The actual number of cars unloaded in this market may thus be slightly less than the total stated above.

Table 2. Carlot Receipts of Fruits and Vegetables
in Columbus, 1932

Commodity	No. of Cars	Commodity	No. of Cars
Apples	246	Lettuce	424
Apricots	1	Onions	173

II. Commodities Received

During 1932 eighty-five different commodities were received in trucks in the Producers' Wholesale Market in Columbus. For purposes of simplification the records of these have been consolidated in this report under 61 headings; the volume of each is shown in Table 3.

Apples and crabapples are listed together as "apples". "Beans" includes green beans, wax beans, lima beans and fresh shelled beans. "Berries (other)" includes elderberries and gooseberries. Broccoli is included with "cauliflower". Shepherd's sprouts are listed with "cabbage sprouts". "Greens" includes various kinds of greens or salad plants, such as dandelions, turnip tops, watercress and swiss chard. Butternuts, chestnuts, hickory nuts and walnuts are listed together as "nuts". "Onions (dry)" includes all onions reported as dry onions, onion sets and pickling onions. "Onions (green)" includes leek as well as green onions. Apricots are included with "peaches." Prunes are included with "plums". "Miscellaneous" is made up of various minor commodities, including dill, honey, mint, mushrooms, parsley roots, persimmons, poke, popcorn, pawpaws, sage and others.

In quantity, potatoes led the list of truck arrivals with more than four and one half millions of pounds, or 14.2 per cent of the total truck receipts for the year. Green corn was second with almost four million pounds, followed closely by tomatoes, with more than three and one-half millions. Between two and three millions of pounds each of cabbage and apples were received. These five leading commodities accounted for practically one-half of the total tonnage arriving in trucks.

In Figure 1. the leading commodities are compared in terms of volume received.

Figure 1. Receipts by Commodities, 1932

III. Sources of Truck Receipts

Produce arriving in the growers' market in 1932 originated in 60 Ohio counties and in ten states outside Ohio, a greater area than heretofore recorded. This expansion of area has been continuous during the four years 1929 to 1932, the market drawing from a wider territory each season in trucks.

Franklin County, in which Columbus is located, as usual furnished a greater part of the trucked-in supplies than any other county. This county furnished 56.1 per cent of the truckloads and 30.1 per cent of the produce recorded in this market in 1932. Pickaway County ranked second with 10.4 per cent of the truckloads and 11.7 per cent of the produce.

More states other than Ohio were represented in this market during 1932 than in preceding years and the number of truckloads and volume of produce actually arriving from other states likewise was larger. 541 trucks, bearing 3,533,228 pounds of produce, arrived from other states in 1932, representing 3.5 per cent of the trucks and 10.8 per cent of the produce. Truckloads from other states averaged 6,530 pounds per truck in 1932 as compared with an average of 1,966 pounds for those originating in Ohio.

Distances traveled varied from an average of about 5 miles for the trucks originating in Franklin County to approximately 950 miles for each of four trucks originating in Florida. The average one-way haul per truck was 37.6 miles, the largest distance yet reported, as will be noted by reference to Table 1. The total round-trip distance traveled by the 15,340 trucks was 1,153,670 miles, a much greater mileage than was covered in any previous year.

The sources of these receipts are shown in Table 4 and Figures 2 and 3.

IV. Daily and Seasonal Receipts

As in previous years Saturday's receipts exceeded those of any other day in the week. On the average one-fourth of the produce arriving in trucks during the week was received on that day. This market is a "three-day" market - Tuesday, Thursday and Saturday each week - but during the height of the season trucks arrive and sales are made in quantities every day. The three so-called "market days" accounted for 66.8 per cent of the total receipts and 69.2 per cent of the trucks. Daily arrivals ranked in the following order: Saturday, Tuesday, Thursday, Wednesday, Friday and Monday.

The largest single day's receipts were recorded on Saturday, September 10th, with 183 trucks bearing 480,943 pounds of produce. Congestion of the market on this and other days of heavy receipts was a serious handicap, both to buyers and sellers. Relocation of the market early in 1931 on city-owned property accommodating a maximum of 75 trucks obviously did not solve the problem of traffic congestion in mid-season. Trucks in excess of the capacity of the market grounds had to be accommodated along curbs of adjoining streets. On 87 days in 1931 and 88 days in 1932 the number of truckloads arriving exceeded 75 per day.

Table 5. Average Daily Receipts in Trucks, 1932

Figure 4. Average Daily Receipts, 1932

15.

Receipts are recorded by weeks in Table 6 and Figure 5. The greatest quantity of produce arriving in trucks in a single week was received during the six days September 12th to 17th, when **779 trucks** bearing 1,972,126 pounds of produce were reported.

The entire week of March 7-12 elapsed without any truck arrivals being reported. Aside from this period the smallest receipts in a single week were recorded during the six days February 22nd to 27th, with 55 truckloads aggregating 58,825 pounds. In 1929 the smallest receipts in any one week were 8,750 pounds; in 1930 they were 15,020 pounds, and in 1932 they were 22,820 pounds.

Figure 5. Truck Receipts by Weeks, 1932

September receipts in this truck market exceeded those of any other month, as usual. Arrivals in September were 3057 trucks, containing 7,671,445 pounds. These arrivals were greater than in any single month previously recorded. **Almost** one-fourth of all the produce received in trucks during 1932 arrived in September. The months of July, August, September and October accounted for 74 per cent of the total for the year. See Table 7 and Figure 6.

Table 7. Receipts by Months, 1932

Month	Total weight (pounds)	Pct. of total	No. of truck- loads	Pct. of total	Av. weight per truck (pounds)
January	379,338	1.2	282	1.8	1,345

V. Value of Truck Receipts

The farm produce trucked to the Producers' Wholesale Market in Columbus in 1932 had an estimated sales value of approximately two-thirds of a million dollars, almost \$100,000 less than in each of the three previous years. The value of each commodity is given in Table 8.

These values were calculated by multiplying the amount received in each month by the weighted average wholesale price on the producers' market during that month as reported daily by the Ohio Division of Markets, prices and commodities both being considered in original units. The values of these commodities were consolidated in the same manner as described on Page 8 in connection with the quantities reported.

As in the three preceding years, the value of the tomatoes sold in this market in 1932 exceeded that of any other commodity, although the value declined materially from those of 1929, 1930 and 1931. This one commodity sold for approximately \$73,000. or 11 per cent of the total. Beans, cantaloupes, corn, potatoes and apples followed in the order named, with values ranging from \$48,000. down to \$39,000. These six products accounted for 44 per cent of the total value of all commodities received in trucks in this market in 1932.

The value of truck receipts in September was approximately \$141,000, and exceeded those in other months although the value in July was only slightly less. In the five months June to October inclusive, the values of the products sold varied from \$84,000. to \$141,000. In these months the value represented 85 per cent of the total for the year. See Table 9.

Table 8. Estimated Value of Receipts in Trucks by
Commodities, 1932

Commodity	Gross Value	Pct.	Commodity	Gross Value	Pct.
Apples	\$39,426.47	5.98	Mangoes	\$ 7,261.52	1.10
